

Update #7 - View Testing Status Interface Improved

May 8th 2008

1. View Testing Status - Apply Filter

Many districts are now using DMAT Online throughout their district, so the Division section of **View Testing Status** can be quite long. To eliminate the necessity to scroll down the list to see the report status of a particular school, we have added a filter to **View Testing Status** that enables you to specify the school for which you want to see **Division** reports. You simply open the **Show only this school:** list box, choose the school for which you want to view the reports, and click **Apply Filter**. The report status for only that school will appear. (The default shows all schools.)

2. View Testing Status - Totals

The **View Testing Status** interface now shows at the bottom of the **# of Students Loaded** column the total number to students in your district loaded into our system. Note that this also works when the **Apply Filter** (above) is used; i.e. it will show the total for a particular school.
