

Update #9 - Add/Edit/Delete a Student added to Admin Zone page

To enable coordinators to add a student to a division and / or a test, to edit either the demographic data of an existing student, or to delete a student from the Testonline system, we have added **Add/Edit/Delete a Student**.

Examples of instances where you would use this tool include:

- A new student comes to your school after the data for his/her classmates has been uploaded.
- A student's demographic information - name, school or division - changes after his/her data has been uploaded.
- A particular student is to take another (different) test.
- A student leaves the school and you want to delete his/her test data. (*Note that once a student is deleted, his / her test data is not recoverable.*)

It would be inefficient to use this tool for uploading a batch of students; you would use the standard uploading procedure for that.
